
Driver Acpi Tos6205 Toshiba

[Download](#)

Device manager shows an unknown device: ACPI\TOS6205. All other devices are identified. My laptop is Toshiba Satellite L50b PSKTQE, . The operating system is Windows XP Home. What could have happened? For example, the device driver could fail. But there is one important "but" - the device is defined as unknown. And this means that the driver, most likely, was not removed, but simply not installed by the system. To find out if this is true or not, you just need to launch the Device Manager. To open the Device Manager, click the Start menu item and select Control Panel > Device Manager. In fig.
