It was a loaded comment. What it meant was “you are a child.” Or worse, “you will never understand.” It was a reminder, also, that I was different. The need to explain, to explain away, was one reason I hid so much in my youth. It meant I was a puzzle and no one could quite put me together. But the idea of understanding — of trying to understand rather than being put in a box — stayed with me. I knew the idea well. It could explain the structure of a social organization, as in Maude LeVern’s classic book *The Anatomy of a Large Corporation*. It could explain literature, as in T.S. Eliot’s “*The Wasteland*.” And it could explain people. Which is why, after a year of study, I decided to write my senior thesis on understanding. This endeavor, I knew, would put me in the company of great social thinkers like Sigmund Freud, Karl Marx, Max Weber. That the topic should be called “understanding” made perfect sense to me. After all, I would be studying what it is to be a person. I selected 15 books on understanding — from essayists like Charles Baudelaire and Mark Twain to social theorists like Sigmund Freud, George Herbert Mead, Max Weber, and Émile Durkheim. Then I read through each chapter, trying to put into words the authors’ understanding of what it is to be a person. How do we make sense of others? How do we understand them? It was at that point that I realized something amazing. It’s not that great, or even pretty good, writing about understanding. In fact, it’s often terrible.

way language is established in human societies greatly influences the construction of personal meanings. Studies of animals (particularly invertebrates) as a source for models of a society of discourse, could be helpful to define the historical dynamics of language. In this work, we focused on a study on one of these models, from Japan. Our observations of sponge language were made through an approach of a comparative analysis with fish language of a land snail. In Japan, words from the Ctenoidea order (i.e., the Spionidae and the Buccinidae families) have been documented in 2002 as a language of a mollusk. It is the first case of "transmission of information through interspecific communication", in which the word, the impression, the meaning are not only mediated by a sensory stimulus (visual, olfactory and tactile).

Q: How to authenticate against Single sign on using OIDC as Azure AD How can I make Azure AD authenticate against an existing Single sign on in a REST API? The OIDC flow in Azure AD in the authentication section, does not list any endpoint I could use. This documentation uses a postman, but I don't understand what I have to do to make it work from my webapp. Using Azure App Insights, I can see that my single sign on "incoming request" endpoint exists, even if it does not have any endpoint listed in the authentication section of OIDC in Azure AD.
